# MAINTAINING AND TREATING PERI-IMPLANT TISSUES

**14 CPD hours**  
**2 Course dates**  
**per year**  
**£350**

It is essential that the oral health status of the implant patient is reviewed on a regular basis. Hygienists, Therapists and Dentists need to monitor the health of tissues for complications such as peri-implant mucositis and peri-implantitis, this is vital to the long-term success of the implant treatment. The Maintaining & Treating Peri-Implant Tissues course aims to empower the Dental Team with the confidence and knowledge to recognise, monitor and treat peri-implant disease.

## LEARNING OUTCOMES:

- Understand the components and different implant types.
- Identify and modify the risk factors for the health of the peri-implant tissues.
- Identify the differences in periodontal diseases and peri-implant diseases.
- Diagnose peri-implant disease.
- Use evidence-based guidelines to help develop practice protocols for monitoring and maintaining dental implants.
- Use evidence-based guidelines to help develop practice protocols for managing and treating peri-implant disease.
- Hands-on experience of correct probing and debridement techniques.
- Develop further understanding of referral pathways and when to refer.

## LEARN NEW SKILLS - ENHANCE PATIENT CARE

## ENTRY REQUIREMENTS:

To apply you must be a Dental Hygienist, Dental Therapist or Dentist registered with the General Dental Council (GDC) or the Irish Dental Council.

Candidates completing the course will be awarded an eCPD certificate (14 hours) fulfilling GDC Development Outcomes A, B and C.
